Milsoft Outage System and OpMoSys Mobile Transaction Platform Interoperative Successfully via MultiSpeak 3.0 Standard

ABILENE, Texas – October 22, 2013 — Milsoft Utility Solutions, Inc., Milsoft Outage Management System and OpMoSys Mobile Transaction Platform have passed MultiSpeak 3.0 interoperability testing.

Milsoft and OpMoSys have successfully passed interoperability tests for the interface between the Milsoft Outage Management System and the OpMoSys Mobile Transaction Platform in compliance with the MultiSpeak® 3.0 standard. "The interface between Milsoft and OpMoSys will let our utility OMS users' customers to notify them of service outages by text message from their mobile device," said Milsoft Vice President of Product Management Becky Paul, "and the notification will be used by the OMS for outage detection and response." The interface also provides data to OpMoSys to use to notify registered utility customers of outages and service restoration. "Our MultiSpeak certification demonstrates the OpMoSys commitment to integrating our mobile solutions with our customers' other systems and applications while leveraging industry standards," said OpMoSys Founder and CEO Ayodale Cole, "and the integration with Milsoft will significantly decrease implementation cost and timeline for our customers while giving them a highly scalable and robust mobile offering."

About Milsoft

The Milsoft team has provided industry leading engineering and operations (E&O) software and legendary customer support to electric utilities and related organizations in the US and abroad for more than 25 years. More than 1,100 utilities, consultants, universities, research labs and others use Milsoft software. The Milsoft Engineering & Operations System includes Engineering Analysis, Outage Management, Geographic Information, Field Engineering and IVR Communications which seamlessly interoperate and share a common data base and are designed to interoperate and share data with a utility's other systems and applications so as to enable the most efficient and effective planning, operation and management of an intelligent grid.
